

Exadata Database Service on Dedicated Infrastructure

All-in-One Datasheet (Beta) Produced by DBExpert

Overview

Exadata Cloud Infrastructure runs Exadata Database Service, where infrastructure is managed by Oracle and the customer has control over most aspects of their database service. This provides customers with an easy path to migrate applications to the cloud by using the same Exadata capabilities available on premises but without having to modify operational procedures.

Capacity

Configuration Options	<p>Elastic X11M infrastructure configuration shapes range from 2 database and 3 storage servers, up to a total of 32 database and 64 storage servers to achieve the exact ratio of compute to storage required. Each database server provides 720 ECPUs, and each storage server provides 64 TB of database storage (no local backup).</p> <p>Elastic configuration example 1 is the minimum size elastic configuration with 2 database and 3 storage servers. Elastic configuration example 2 with 8 database and 8 storage servers and elastic configuration example 3 with 2 database and 14 storage servers are example elastic configurations that provide the highest SQL Read IOPS and Bandwidth in a theoretical single rack, respectively.</p>
