

Exadata Database Service on Cloud@Customer

All-in-One Datasheet (Beta) Produced by DBExpert

Overview

Exadata Cloud@Customer uniquely combines the world's top database technology and Exadata, the most powerful database platform, with the simplicity, agility and elasticity of a cloud-based deployment. The X10M system (and later) leverages Exadata RDMA Memory (XRMEM) and RoCE capabilities that are co-engineered with Oracle Database to reduce latency and increase performance. The Cloud@Customer service is identical to Oracle's Exadata Cloud Service but located in customers' own data centers and managed by Oracle Cloud experts, providing a consistent Exadata cloud experience, whether on-premises or in the cloud.

Capacity

Configuration Options	Flexible shapes start with 2 database and 3 storage servers, and can be expanded up to 16 total servers in a single rack and up to 32 database and 64 storage servers across multiple racks to meet a variety of processing and storage requirements. Each database server provides 720 ECPUs, and each storage server provides 64 TB of database storage (no local backup). Elastic configuration example 2 and elastic configuration example 3 are examples of typical elastic configurations that provide the highest Flash Read IOPS and Flash Bandwidth in a single rack, respectively.
